

TAFT-HARTLEY CYBERSECURITY

Secure the Multiemployer Retirement Ecosystem

Cybersecurity for Taft-Hartley plans is no longer just about protecting a core administration system. It is about securing every connection that supports the contribution-to-benefit lifecycle.

THE INDUSTRY CHALLENGE

The risk is bigger than the core system.

Taft-Hartley plans operate across a connected network of employers, trustees, administrators, participants, financial institutions, technology providers, and other third parties. That makes cybersecurity a governance, third-party risk, data integrity, fiduciary, and operational resilience issue, not only an IT concern.

- ? Who can access participant and employer data, and what can they see or change?
- ? How are employer connections, data exchanges, integrations, and third-party access protected?
- ? How is contribution data authenticated, reconciled, and protected from alteration?
- ? How will critical operations continue during a security event or outage?

The goal: reduce exposure, limit impact, respond effectively, and restore operations

HOW MAJESCO CAN HELP

Security embedded in the operating foundation.

Majesco takes a risk-based, defense-in-depth approach designed to help organizations continuously strengthen security visibility, governance, and resilience.

GOVERNANCE

NIST-aligned cybersecurity governance

ASSURANCE

ISO 27001 certification and independent SOC assurance

VISIBILITY

Vulnerability management and continuous improvement

DEFENSE IN DEPTH

Layered controls across identity, cloud, apps, and networks

Majesco V3locity

A modern administration platform designed for connected processes, configurable rules, automated workflows, visibility, auditability, digital self-service, and modern integration.

Move the conversation forward.

Bring security, governance, modernization, and resilience together for Retirement and Pension administration.
